

## 4" ARM TO UNLOAD WATER INTO LARGE SPRAYERS

**A JOSKIN MODULO2 14,000 tanker with equipment to increase the output of large sprayers in high season.**

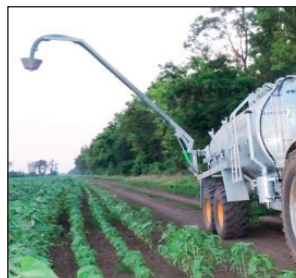

This tanker is fitted with an active mixing system and a filling device that can reach 4.9 m high. This equipment allows to increase the output of sprayers by 15 to 30%, which is particularly interesting with self-propelled and trailed models. The arm allows to fill tanks through their upper openings in 3-4 min, against usually 15 to 30 min without this installation.

The device is sold in kit and can directly be mounted on the buttresses of MODULO tankers fitted with a vacuum pump PN 106 JUROP 10,000 l.

Ref.	Type
5259	4" arm (1 SA + 1 DA) to unload water – only available on MODULO from 10,000 to 18,000 (buttresses compulsory)

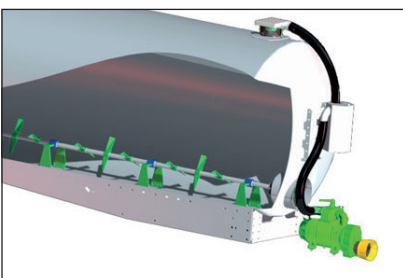

Hydraulic folding in transport position.

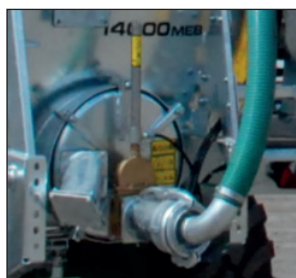

Rotation and lifting through hydraulic rams.

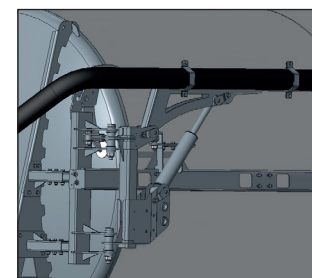

Filling arm up to 4.9 m above the ground.

Integrated mixer with direct connection to the tractor (option).

Connection to the valve and quick coupling of the scatterer.

Mounted on the buttresses.
